## Your grade: 100%

Your latest: 100% • Your highest: 100%

To pass you need at least 80%. We keep your highest score.

| 1. | "import numpy" is an optional line in our code  | 1 / 1 point |
|----|---|-------------|
|    | ○ True  |             |
|    | False   |             |
|    | Correct! to be able to use numpy functions and objects we need to import it at the top of our code. |             |
| 2. | To take an input from the user we use the function:   | 1 / 1 point |
|    | int()   |             |
|    | input()   |             |
|    | Correct! To accept an input from the user the function input() is used                              |             |
|    | O flip()  |             |
|    | cos()   |             |

The function is\_winning\_move() returns what type of data?

boolean

1 / 1 point

|    | Correct! It returns either true or false indicating if the player won   |             |
|----|---|-------------|
|    | integer   |             |
|    | string  |             |
|    | ○ float   |             |
|    |   |             |
| 4. | Functions do what they are intended to without being called.  | 1 / 1 point |
|    | ○ True  |             |
|    | False   |             |
|    | Correct! Every function should be called first to execute what it's intended to                               |             |
| 5. | To initialize pygame's function and modules the following line is used:                                       | 1 / 1 point |
|    | import pygame   |             |
|    | o pygame.init()   |             |
|    | Correct! before you use any of pygame's function and modules you have to initialize pygame first by this line |             |
|    | <pre>pygame.display.set_mode()</pre>  |             |
|    | <pre>pygame.display.set_caption()</pre>   |             |
|    |   |             |
| 6. | To change the title of your game window, the following function is used.                                      | 1 / 1 point |
|    | <pre>pygame.display.set_mode()</pre>  |             |

|    | pygame.display.set_caption()   |             |
|----|--|-------------|
|    | Correct! To change the title of your game window pygame.display.set_caption() is used. |             |
|    | pygame.display.update()  |             |
|    | pygame.draw.rect()   |             |
| 7. | The event that represent clicking on the mouse is called:                              | 1 / 1 point |
|    | pygame.MOUSEBUTTONDOWN   |             |
|    | Correct! This event is activated whenever the mouse button is clicked.                 |             |
|    | O pygame.MOUSEBUTTONUP   |             |
|    | O pygame.KEYDOWN   |             |
|    | O pygame.MOUSEMOTION   |             |
|    |  |             |
| 8. | To get the position of the mouse we use the attribute:                                 | 1 / 1 point |
|    | event.pos  |             |
|    | Correct! to get the current location of the mouse the attribute<br>Event.pos is used   |             |
|    | event.button   |             |
|    | event.rel  |             |
|    | event.state  |             |

| 9.  | The      | e first argument the function pygame.draw.line() takes is:  | 1 / 1 point |
|-----|----------|---|-------------|
|     | •        | the game window   |             |
|     |          | Correct! the first argument taken is the window that will be drawn on                                   |             |
|     | 0        | the color   |             |
|     | 0        | the x-position  |             |
|     | 0        | the y-position  |             |
|     |          |   |             |
| 10. |          | en importing an image, you always have to pass the full path as an ument.                               | 1 / 1 point |
|     | 0        | True  |             |
|     | <b>O</b> | False   |             |
|     |          | Correct! If the image is in the same directory as the code, the image name with the extension is enough |             |
